

### **Kristin Duffield Receives International Research Travel Grant**

Kristin Duffield recently had the honor of being awarded a Godfrey Hewitt Mobility Award from the European Society of Evolutionary Biology. Kristin, a Ph.D. student under the advisement of Assistant Professor Ben Sadd and Distinguished Professor Scott Sakaluk, was one of only eight Ph.D. students and Post docs to receive this internationally competitive award in 2017. The funding of Kristin's proposal, entitled "Dependence of a dynamic terminal investment threshold on diet-related condition in male crickets", will enable her to complete a research trip to the lab of Professor John Hunt at Western Sydney University, Australia. Working together with collaborator Professor Hunt, Kristin will learn and develop new techniques that will lead to the fulfillment of her project and further career development.
